Intro

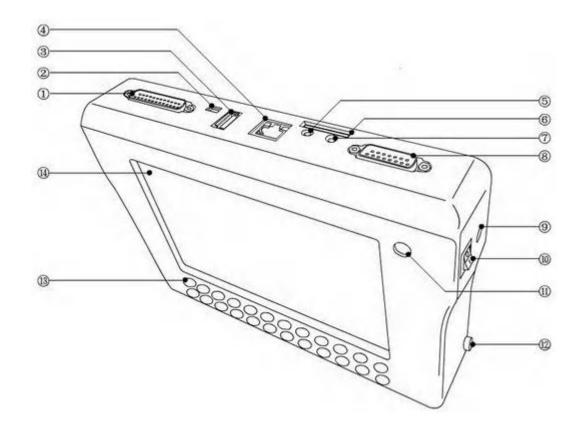

1.Feature and Function

DigiMaster-III is the third generation multi-functional Automobile data adjusting equipment developed by Nanning Yanhua Electronics Co., Ltd. It bases on a high performance hardware platform which takes high-speed CPLD and the ARM11 processor as the core device. Seven inch LCD touch-screen with high resolution makes its interface easy-used. Working with various types of adapter you can easily achieve odometer correction**i**¢Audio decoding**i**øairbag resettingiøengine ECU resettingiøIMMO, programming key for Benz and BMW etc. It is applicative for all types of data processing such as OBD connection, dashboard soldering, CAS-BDM.

It contains the advanced technology of programming new keys for BMW and Benz, CAS-BDM reading/writing and resetting, 35080V6 erasure etc. The operation interface is highly user friendly, large numbers of pictures and particular description makes your operation pleasant. Online updating and module authorization keeps you always on the leading edge of technology.

Software Instrallation

This section will show you how to install software of DigiMasterIII as well as how to connect it with your PC.

1.Installing D3 Tool

Setp 1: Double-click the installation files in the CD.

Step 2: Choose the route of Installation

Step 3: Open the software interface as below after installation

2.Connect the D3 with PC and internet

Step 1: Connect the D3 USB with PC. Click "Cancel" after the window bombed as below.

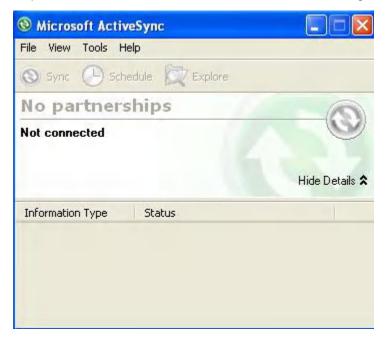

New Partnership	×
	Set Up a Partnership
	Before you can synchronize information between your mobile device and this computer, you must set up a partnership between them.
	Would you like to set up a partnership?
	Set up a partnership so that I can synchronize information between my device and this computer.
	○ No
	I don't want to synchronize information. Set up my device as a guest so that I can copy or move information between my device and this computer.

	Hide Details 🗙
Information Type Status	

Step 4; Just reconnect the USB cable if the USB connecting is cut showed as below window.

MInsert the connector of LAN cable into RJ45 LAN connector of D3 to make online update.

3.Remote Assistance

Our engineers will provide you on-line technology support via internet when you choose long-distance assistance function.

Step 1: Please contact the Sales from my company to obtain an IP before the Remote Assistance. Then connect your D3 with internet.

Step 2: Open D3 Tool software to enter"Remote Assistance", then choose "Require Remote Assistance".

Step 3: Input the obtained IP and click "OK" in the bombed window $_i$ £

< Back Next > Cancel)

Step 3: Choose " Install software automatically", Click "next".

Step 4: Running D3 tool software, choose "KERNEL update"

Step 5: Indication "USB connect successfully" will appear as below after the USB is connected.

User Notes: Before updating, please set to	[
update mode, and then press "1" key and "OK" key simultaneously to enter	Kernel Update
USB connect failed	
System update tip:	Quit

Step 6: Click "KernelUpdate", choose kernel files, then click "OK" to start renovation.

Step 7: Several minutes is need for kernel renovation. It is finished when the indication of "USB connect failed" appear.

Easy Operation Manual

Helping you checking accessories $\pounds\neg$ complete the activation $\pounds\neg$ authorization and updating.

1.Activation

Digimaster-III need to be activated on line with the Activation code provided by us in the first using. You can activate and recharge Digimaster-III by the following steps.

Step 1: Power on and connect the D3 with internet. The unactivated £DD3 show as below. Click "OK" to start activation.

Step 2: Input the validation code in the left dialog, Click "next" to download update programme and management programme.

Update Device Files

Operation sample

In This section, we use a specific car as an example to elucidate the entire proceeding of odometer correction?Audio decoding?airbag resetting?Controlling ECU resetting?IMMO, programming key for Benz and BMW etc.

1.Programmer

1.1 Files Operation

You will find the following interface during many operations(IC programming, CPU programming,Odometer adjusting,Audio decoding). It show the current data read from the IC by HEX format. You can adjust or save the data in this interface.

HEX address is in the left column. Data area is in the right column. Data ASCII display is in the bottom when you move the scroll bar.

1.4 Signal Generator

Frequency signal generator can generate the specified speed signal, connect to the signal pin in the odometer and then used to run the odometer.

2. Audio decoding

When the vehicle audio was power off because of buttery damage, the audio will start the anti-theft system automatically. Digimaster III can calculate the audio code out or initialize the it.

2.2 Audio Code Management

Step 1: De-solder the corresponding chip according to the software prompts. Click "Next" to begin decoding.

Ford GM Honda Mazda Mitsubishi Peugeot	Lexus Porsche
	Porsche
Renault Toyota Volvo	Volkswagen
Other Address BMW TV-free	

Step 2: Please remember the code in the pop-up dialogue box, click"Next", the code was written in the chip.

Step 3: Solder the chip back to the board, and then use this new code to decode the audio.

2.3 Address Code

These models only need to short-circuit some welding spot to reset the code, the software will give a specific method.

3.Meter System

3.2 IC Adjusting

De-solder the chip from the odometer, and solder it back after adjusted.

To make sure the data was safe, please save the original data before change it by yourself.

Step 1: Click on "Odo adjuster" on the homepage, and then choose the car model of the odometer. For example: American vehicles- Chrysler.

Chrysler:(See the Help)	Back	
300C	98 Cherokee C56	Neon

Step 3: The anti-theft code will be shown in the dialogue box.

4.2 Key Binding

The BZ-KEY and BM-KEY produced by our company can only be programmed by our key programmer(This key programmer also support original key programming), therefore, you need to bind the keys to the programmer before using them.

About "Use the last data"

Suitable for the last data: If you are using Automatic mode, and the operation was stop accidentally, you can use the recorded data and begin with the last step, do not need to start all over again.

Key Binding Steps:

To download the bond key information to the device key list.

Step 1: Click ""Key Register" in Management Center.

Step 2: Enter the verification code into the pop-up Dialogue box.

YH KEY Register Tip: Connecting server(sale.autoemaster.com) Connect server(sale.autoemaster.com) succeed	Verify Code: ckad See clearly
Release ver: 1.5.1012.4	Nk i t step Exit

Step 3: The device will download update to your key list.

About Automatic mode, Advanced mode and Special mode.

Key programming can be done by Automatic mode and Advanced mode. The results of both methods are the same and the process is also similar, the only difference is: when in Advanced mode, you can use you own data (bin format or other YH format), skip some steps to save time and tokens. Special mode suitable for BMW using two keys in one key channel.

4.3 Mercedes Benz Key Programming

Step 1: Go to the Mercedes Benz Key programming page.

Step 2: Take S Class W220 as example, click "S Class", choose Automatic mode, you will see there are 3 steps to program the key for Benz W220.

Appendix3 Replaced Chip List

Original Chip	Replaced Chip	Remark
93C06	93C46	93C06 cannot replace 93C46Ê
9314	93C46	9314 cannot replace 93C46Ê
C46M6	93C46	
DD72	93CS66	DD72 cannot replace 93CS66
DD82	93CS66	DD82 cannot replace 93CS66
S220	93CS66	S220 cannot replace 93CS66
93C56	93C66	93C56 cannot replace 93C66
C56M6	93CS66	C56M6 cannot replace 93CS66
CS56	93CS66	CS56 cannot replace 93CS66
85C72	24C16	85C72 cannot replace 24C16
85C82	24C16	85C82 cannot replace 24C16
24C01	24C16	24C01 cannot replace 24C16
24C02	24C16	24C02 cannot replace 24C16
24C04	24C16	24C04 cannot replace 24C16
24C08	24C16	24C08 cannot replace 24C16
D6253	24C16 or 24C01	D6253 cannot replace 24C16

	D6254	24C16 or 24C01	D6254 cannot replace 24C16
	PDH001	X2444P or X24C44	
	PDH004	X2444P or X24C44	
	X24C01	no	X24C01 & 24C01 cannot replaced each other

Appendix4 Chip Dismantling and Soldering

I.Chip Dismantling and Soldering:

1 The choice of iron:

It should be connected with ground safely. When there is no constant temperature soldering iron, the 20W internal heat-type or 25W external heat-type soldering iron can be OK, but ensure that the former should not exceed 25W, and the latter does not exceed 30W.

2 The choice of flux:

Rosin is the best choice. Solder paste will never be allowed to use in soldering. You should change the rosin immediately when it turns to black.

3 The choice of solder wire: The imported solder wire with low melting point and rosin is the only choice

II.Chip disassembling

1. When unsoldering biserial & straight inserted chip, you can clean out the soldering tin on the pin by disordering gun or disordering wire, please don't draw hard.

2.When unsoldering patch or chip, melting more rosin on the two rows of pins, and heat them up until the chip loose completely, then remove it. Please don't pry hard.

3.Please do not heat the chip too long, or it will be damaged.

4.If there is protection paint on the chip, please heat it up with iron, and scratch gently with a blade or tweezers, then dismantle the chip.

5. How to wipe off the protection paint on the circuit board or IC? Before soldering, please heat the layer of protection paint with iron or hot air to 70-80 degrees Celsius, and then peel gently with a word screwdriver.

III.Chip Soldering

1.Please do not heat the chip too long, or it will be damaged.

2. The iron should be wiped with a damp cloth or soaking sponge to keep it clean ,because it won't be easy to disordering tin in a state of high-temperature oxidation for a long time.

3. The heat conduction should depend on the tin, and it does no good to soldering by the iron head-to-chip hard.

4.Don't move or shake the chip before the soldering solidified.

5. When soldering, you had better first solder the diagonally pins to fasten the chip, and then do other pins.
